WHAT IS CLAIMED IS:

1. A wireless network transmission device comprising

a network control chip, a communication control chip and a control chip set which are arranged in parallel;

a first module and a second module; wherein the network control chip, communication control chip, and control chip set are connected to the first module and the second module through a bus; wherein the first module is connected to an external network communication protocol module and the second module is connected an external mobile phone communication protocol module; thus, the system is communicable with network communication protocol module and mobile phone communication protocol module in parallel; thereby, two data of different protocol can be transmitted by using one of the two protocols;

wherein the control chip set serves to connect a PCMCIA interface to the first module and second module through the network control chip and the communication control chip.

- 2. The wireless network transmission device as claimed in claim 1, wherein in operation, the network control chip and communication control chip are changeable so that signal can be transmitted through one of the chip.
- 3. The wireless network transmission device as claimed in claim 1, wherein the network communication protocol module uses one the protocols of WLAN802.11a, WLAN802.11b, WLAN802.11b+, WLAN802.11g, and WLAN802.11g+.
- 4. The wireless network transmission device as claimed in claim 1, wherein the mobile phone communication protocol uses one of the protocols of GPRS, CDMA, WCDMA, CDMA1X, TD-CDMA.
